## Introduction

A large number of chemical priority lists or lists of chemicals of concern have appeared over the last 40 years. These have been derived by a wide range of organisations, for a variety of purposes, using differing methodologies. We have selected 12 lists covering a range of types and organisations and broadly related to Europe and the USA. The combined list has been compiled from the data contained in the governmental and NGO lists below.

We hope that this list is useful to organisations who want to be aware of potential issues associated with the substances that they use (although we must stress the word "potential", as the evidence for adverse effects is sparse for some of the identified substances).

### California Proposition 65<sup>1</sup>

California Proposition 65 consists of a list of chemicals known to the State of California to cause cancer or reproductive toxicity. The proposition was introduced as part of the Safe Drinking Water and Toxic Enforcement Act of 1986.

### ChemSec SIN List<sup>2</sup>

The SIN (Substitute It Now) list is an NGO project to identify Substances of Very High Concern. The chemicals have been identified using REACH criteria. The SIN list aims to provide a list that businesses can use ahead of legislation to introduce safer alternatives to hazardous chemicals.

### Danish List of Undesirable Substances<sup>3</sup>

The Danish List of Undesirable Substances (LOUS) produced by the Danish Environmental Protection Agency includes substances classified in the EU and substances that have not yet been classified. The List includes substances classified according to such effects as high acute and/or chronic toxicity; carcinogenicity; ability to cause heritable genetic damage; ability to impair fertility; ability to induce allergy; and environmental impact. The list also covers substances that present problems in the marine environment, waste disposal and groundwater. The fact that a substance is included on the LOUS does not signify that the Danish EPA has decided to recommend prohibition of that substance.

### ECHA REACH Annex XIV Candidate List<sup>4</sup>

The European Chemicals Agency (ECHA) administers the new European Chemicals Regulation (REACH). The substances included in the Annex XIV Candidate List have been identified as Substances of Very High Concern. These substances may have

very serious and often irreversible effects on humans and the environment. Reasons for substance inclusion on the Candidate List include carcinogenicity, vPvB (very Persistent and very Bioaccumulative), PBT (Persistent, Bioaccumulative and Toxic), mutagenicity and toxicity for reproduction. Inclusion in the Candidate List is the first step in the REACH authorisation procedure and the inclusion of a substance in the List may have legal implications for manufacturers and users.

### **EU Water Framework Directive List of Priority Substances<sup>5</sup>**

The EU Water Framework Directive List of Priority Substances is contained in its Daughter Directive on Environmental Quality Standards. This identifies substances that have been shown to be of major concern for European Waters. Priority hazardous substance classification has been assigned to 11 substances which are of particular concern for inland, transitional, coastal and territorial waters. The discharge of these substances to EU watercourses will be phased out within the next 20 years. Candidate substances for inclusion on the Priority Substances list are considered by the Commission at regular intervals, so the list of Priority and Priority Hazardous Substances is very likely to expand over time.

### **OSPAR List of Chemicals of Concern<sup>6</sup>**

The Oslo & Paris Commission (OSPAR) is the secretariat appointed to administer the Oslo and Paris Conventions on the dumping or discharge of materials, primarily into the North Atlantic. The OSPAR list of Chemicals of Concern consists of PBT (Persistent, Bioaccumulative and Toxic) substances, or substances which produce an equivalent level of concern. The OSPAR Hazardous Substances Strategy aims to prevent marine pollution by reducing discharges and emissions in order to achieve near background values for naturally occurring substances and close to zero for man-made synthetic substances.

### **OSPAR List of Chemicals for Priority Action<sup>7</sup>**

The substances from the OSPAR List of Concern can subsequently be included in the OSPAR List of Chemicals for Priority Action following the preparation of a background document. The Background Document is used to assess the situation of the substance and the action necessary. Monitoring strategies have been prepared for hazardous substances, which describe the information needed in order to assess progress towards OSPAR target levels.

### **Stockholm Convention List of Persistent Organic Pollutants<sup>8,9</sup>**

The Stockholm Convention on Persistent Organic Pollutants (POPs) is intended to deal with the impact of organic substances which remain intact for long periods of

time, become widely distributed, bioaccumulate and are toxic to humans and the environment. Persistent Organic Pollutants can cause specific effects on humans, including cancer, allergies and hypersensitivity, damage to the central and peripheral nervous systems, reproductive disorders and disruption of the immune system. Some POPs are also endocrine disrupters, which can damage the reproductive and immune systems of individuals and their offspring; they can also be toxic to reproduction, with developmental and carcinogenic effects. The Stockholm Convention List of Persistent Organic Pollutants includes substances classified as elimination, restriction and unintentional by-products. Only the elimination substances have been included in the Avoidance list.

### **US EDSP Tier 1 Screening List<sup>10</sup>**

The US EPA Endocrine Disruptor Screening Program includes substances which may disrupt the endocrine system of humans and wildlife, producing developmental and reproductive problems. The Food Quality Protection Act in 1996 requires EPA to screen environmental contaminants for potential endocrine disrupting effects.

### **US EPA Containment Candidate List CCL3<sup>11</sup>**

The US EPA Containment Candidate CCL3 list includes substances known or expected to occur in public water systems which do not currently fall under any national primary drinking water regulations, but which may require regulation under the Safe Drinking Water Act. The list includes pesticides, disinfection by-products, chemicals used in commerce, waterborne pathogens, pharmaceuticals, and biological toxins, among others. The CCL 3 list includes chemicals, chemical groups and microbiological contaminants.

### **US VCCEP Pilot Programme List<sup>12</sup>**

The US Voluntary Children's Chemical Evaluation Program is the section of the recent Chemical Right to Know Initiative that considers risks to children. The Chemical Right to Know Initiative aims to provide information on the effects of chemicals in order that citizens can make informed decisions in the marketplace. The VCCEP is currently being implemented as a trial before the final processes are determined and additional chemicals are selected. The trial consists of substances to which children have a high likelihood of exposure.

### **REACH Annex XVII<sup>13</sup>**

Annex XVII covers restrictions on substances which, from manufacture, use or placing on the market, pose unacceptable risk to human health or the environment. The decision about unacceptable risk will be based on a combination of both socioeconomic analysis and risk assessment, rather than just the latter. Inclusion of a

substance in Annex XVII may lead to further restrictions and risk management measures, beyond those already in place, for manufacturers, importers, downstream users and distributors. The restrictions in Annex XVII are a consolidation of the restrictions contained in Directive 76/769/EC, which is an approximation of the marketing and use restrictions of particular dangerous substances and preparations by Member States.
